

# Brook & Hunter Forks

If you are gardening without a good garden fork, you are working too hard! It is surprising that garden forks are not more popular. A good fork will out work a spade or shovel in many situations with far less effort. For turning over or breaking up new or existing garden areas, a fork is much more efficient than a shovel. It is the best tool for heavy-duty weeding and digging out large root clumps. Many transplanting jobs are easier with a fork than with a shovel.

We often will first break up weedy, compacted and neglected ground with the digging fork, then follow up with the smaller and lighter border fork to lift out roots and root clumps.

Our forks are manufactured by Brook & Hunter, an American owned company that makes tools in China. They are, by far, the best value of any garden fork we have been able to find. Both forks have a lifetime warranty\* against breakage.

We chose a made in China product because there is no good garden fork made in the US. We trialed the only remaining English garden fork on the market. We prefer our forks because they are lighter and penetrate the ground much easier, thus they are much easier to work with. Brook & Hunter has been making tools and tool handles in China for over fifteen years. Their employees are paid and treated fairly and work at their factory is a sought-after job in the community where the factory is located.

The **digging fork** is for tough jobs and can cover a lot of ground in a hurry. The extremely sharp tines penetrate the hardest and most compacted soils and sods. Use it to turn over soil and to break new ground.

Hand crafted Red Oak Wooden Handle

Stainless steel alloy with multi-layer polished blade.

Standard size - 4.3 lbs. 43 x 7.0 inches

Lifetime warranty\*

**Border Fork:** This is a smaller lighter weight version of a garden fork. It is most efficient when loosening heavy soil where the heft of a larger fork would unnecessarily drain the gardener's energy. Smaller gardeners can implement this tool for everyday purposes, while the larger gardener can use it for specific detailed or intricate jobs.

Hand crafted Red Oak Wooden Handle

Stainless steel alloy with multi-layer polished blade.

Standard size for turning over soil and preparing areas for planting. 4.0 lbs. 43 x 5.5 inches

Lifetime warranty\*
